

Communication Protocols North Texas

What works well – best practices

What are the challenges – identified gaps

Potential solutions/actions

Communication Protocols North Texas

What works well-best practices?

- **Social Media – put the information out**
- **Xmatters Emergency Notification system**
- **Web based Traffic Situation Display**
- **Capacity Numbers for each airline at airports**

Communication Protocols North Texas

What works well-best practices?

- **Diversion Recovery Tool used by AAL**
- **Regional Aviation Collaboration System – each airport reports hourly on capacity, etc. DFW hosts – quick communication**
- **DFW ops – Jerry Crimiel web page contact**

Communication Protocols North Texas

Where are the gaps or disconnects?

- **How do divert airports know how many are diverting to a specific airport?**
- **How do you get the Airport Authority, Airlines and Air Traffic on the same network?**

Communication Protocols North Texas

Where are the gaps or disconnects?

- **Airports cannot take care of unlimited amounts of aircraft and/or passengers.**
- **Communication breakdowns**
- **How does AT identify active diversions?**

Communication Protocols North Texas

Where are the gaps or disconnects?

- **Consider security breaches/suspicious packages – initiate timely Ground Stop to avoid tarmac issues.**
- **How do we identify priority list for departures on divers?**

Communication Protocols

North Texas

Actions Required:

- **North Texas Team – put all diversion airports on the webpage.**
- **Conduct lessons learned after each event via a telcon.**
- **Monthly recap during thunderstorm activity via a telcon.**
- **Look at the positives**

Communication Protocols North Texas

Actions Required:

- **On a big event get immediate feedback positive/negative.**
- **Look at trends**
- **If there is a known event – have a planning telcon prior to the event**
